

## **U.S. and World Population Clock**

The U.S. Census Bureau has a data tool that provides a quick and interactive overview of the latest estimated population in the United States and worldwide.

The **U.S. Population Clock** displays continuously updated projections of the total population, including the rate of births, deaths, net migration, and more for the United States.

The **World Population Clock** provides a continuously updated world population total, a list of the 10 most populous countries, and easy access to more world population statistics.

Visit the clock at [census.gov](https://www.census.gov) for an estimate of the world population and an indication of how fast it is growing.

Did you know? The world population reached **1 billion** in **1804**, shortly after the second decennial census in **1800**, which counted **5.3 million** Americans.

According to the latest estimates, the world population reached **7 billion** in **2012**, and new projections indicate that we'll reach **8 billion** in the coming years.
